

Performance – Run Checklist

Steam Coils

You can use this checklist to collect the necessary information. For unknown information, we'll make assumptions and tell you what those assumptions are in the quote.

Steam Coils:

- 1) _____ Type? Steam distributing (sometimes called “non-freeze”) **or** standard steam.
- 2) _____ CFM?
- 3) _____ OUTPUT desired? Either in MBH or Leaving Air DB.
- 4) _____ Where is it going? Carrier AHU/some other AHU / a duct (duct-free area or FH x FL?) If duct size is unknown, we'll base size on our FV guidelines.
- 5) _____ Entering Air Temp? If unknown, then do you know if it's outside or return air?
- 6) _____ STEAM psi If unknown, we'll assume 2 psi.
- 7) _____ Max. Air Pressure Drop? If none shown, we always try to minimize.
